

metronome

The World's First Cross-Blockchain Cryptocurrency

For decentralization and endurance, Metronome is founded on three key principles:

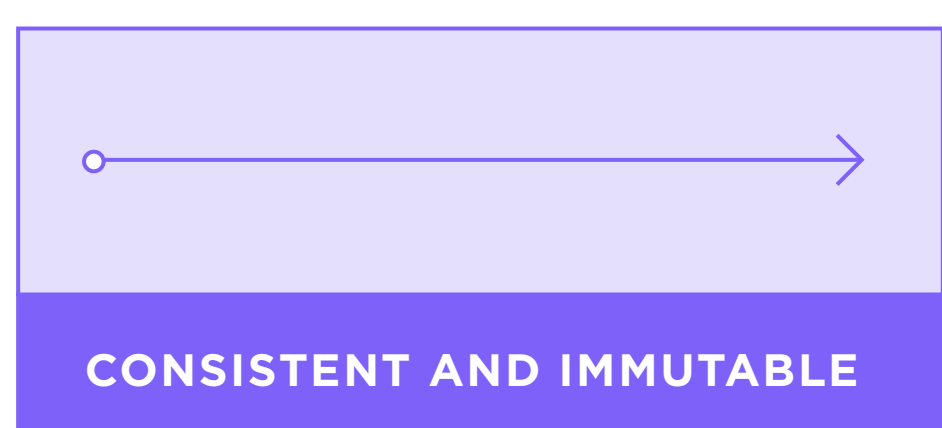

SELF-GOVERNANCE

Zero founder control after launch, and public access

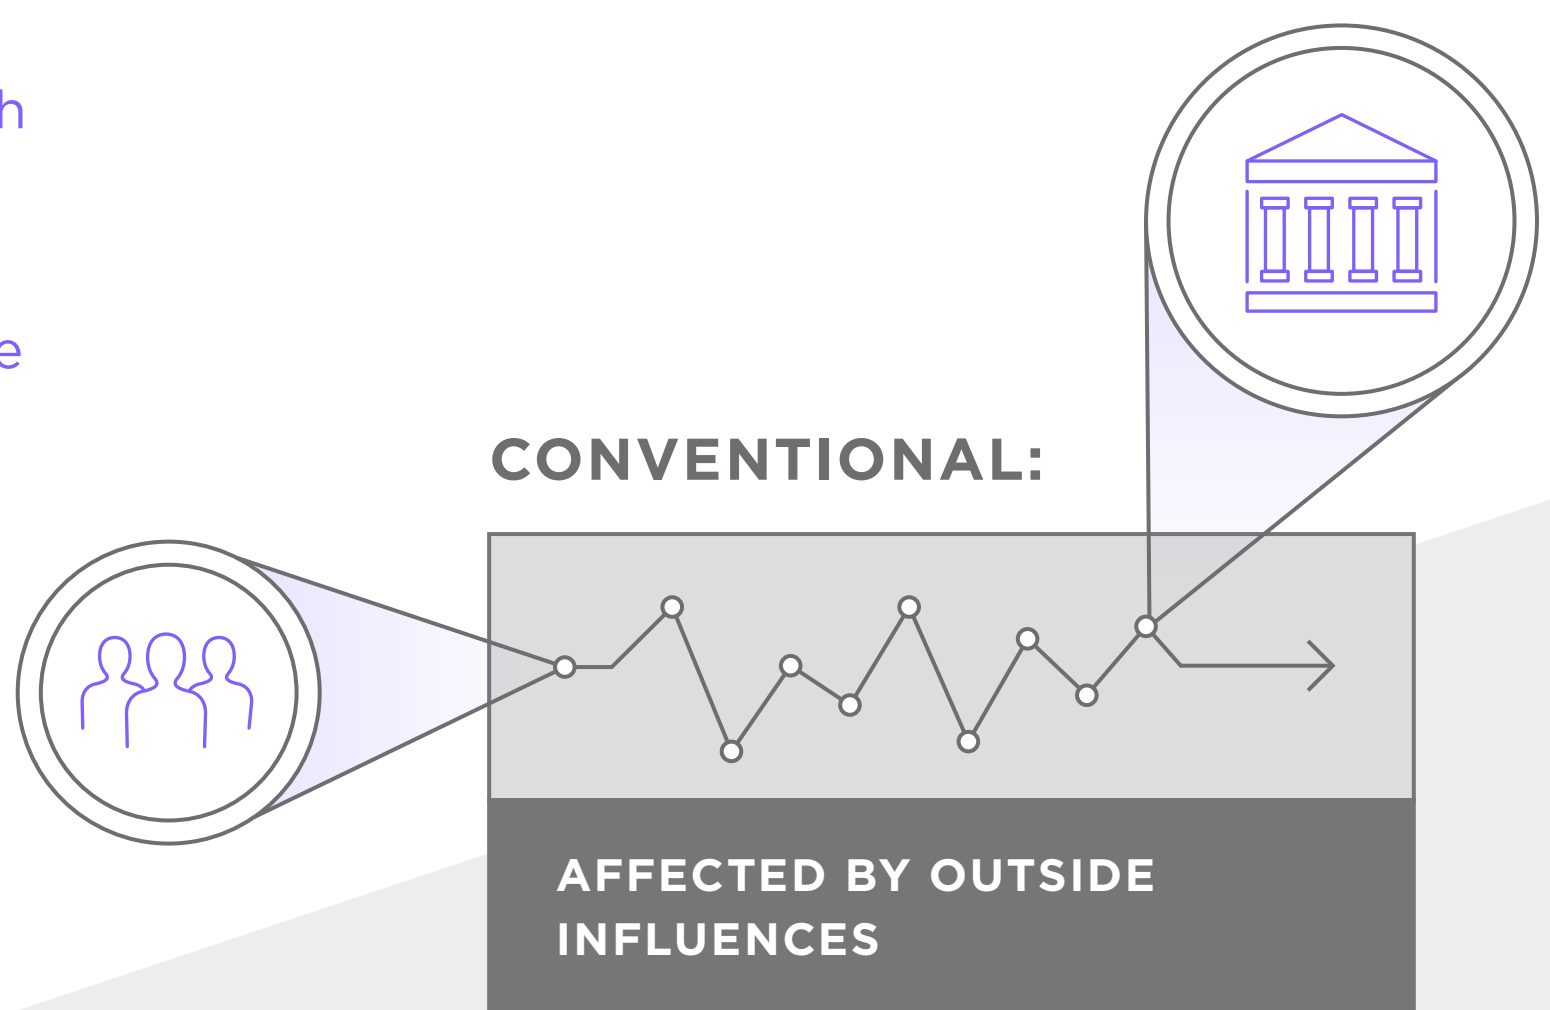

Managed by smart contracts and its user community after launch

Resistant to individual or community influence and discord

MTN:

CONVENTIONAL:

RELIABILITY

Architected for stable and predictable supply with descending price auctions.

Fair price discovery, predictable, and steady supply over time

New MTN minted daily ad infinitum

MTN:

CONVENTIONAL

PORTABILITY

The world's first cryptocurrency that can move across blockchains.

Provides import-to and export- from chains for any reason

Protection from management issues and instability
